nbn reaches four million homes; network one third built

nbn has reached a significant rollout milestone, with four million premises now Ready for Service (RFS) on the **nbn**[™] network. This landmark means that the **nbn**[™] network is now available to more than *one third* of all Australian premises.

By the end of December 2014 **nbn** had made 778,824 premises RFS. In the following two years, a further 3.22 million premises have been made RFS.

In the last two years **nbn** has launched four technologies: FTTB, FTTN, HFC and Sky Muster satellite broadband. FTTN is the driving force behind the increased pace of the build thanks to the very fast pace with which it can be designed and deployed with well over 1 million FTTN premises already RFS.

nbn Chief Network Engineering Officer Peter Ryan said:

“Reaching four million premises RFS is a great achievement and is a testament to the hard work of our people and our delivery partners.

“We now have the flexibility and the right technologies in place to design and build the network at the speed and scale needed to reach our end goal by 2020.

“With these four million premises our halfway built milestone comes into focus – we are expecting to reach this around the middle of the year.”
