

GET READY FOR GREAT.

Preparing your home for high-speed internet starts today!

We're proud to partner with nbn to help bring you reliable, high-speed internet¹ that's built with the future in mind. With fibre being extended deeper into our community, the nbn® network is helping to revolutionise the way we live, work, and play.

The good news is, nbn Fibre to the Premises (FTTP) will be available in your street, with your block of land ready to support this full fibre technology. Act now with your builder to help ensure your home is internet-ready when you move in, avoiding disruptions to new landscaping or driveways in the future.²

Here's how

1. Get your home pre-installed.

Work with your builder to ensure they install the nbn connection equipment, while the home is in construction, by completing an nbn [pre-installation request](#).

Note: Costs associated with nbn's pre-installation have been pre-paid by us, your developer, however some building costs for the creation of the pathways may apply.

Pro tip: Talk to your builder about including 'pre-installation of nbn equipment' in your build contract.

2. Get your home prepared.

Consider how the broadband service will be distributed around your home to get the best coverage. This may include adding extra cabling in your new home.

Note: Installation of cabling in your new home after construction can be both challenging and costly.

Pro tip: We recommend that your builder install a Cat 6 cable from the nbn connection box location to a central point in the home. You can then centrally locate your Wi-Fi router and/or install a mesh Wi-Fi network.

Check out optimisation tips [here](#).

Act now with your builder to help ensure your home is internet-ready when you move in, avoiding disruptions to new landscaping or driveways in the future.²

YOUR HOME, YOUR FUTURE.

built with **nbn** 

Get ready to enjoy one of nbn's fastest and most reliable home internet services.¹

Do great things as soon as you move in.

Superior speed¹: Take advantage of higher nbn[®] speed tiers to turbocharge your online activities, enabling your home or business to thrive, even when multiple people are online at the same time.

Seamless experience¹: Whether gaming, streaming in 4K, working or learning online, you'll enjoy a smooth experience with less buffering or dropouts.

Freedom of choice: Choose from over 150 providers³ on the nbn[®] network, each offering a variety of plans suited to your needs.

A smart investment: With 4 out of 5 buyers⁴ expecting an nbn connection, getting your new home nbn future ready can make it a wise investment.

Your company logo goes here.

Ensure pink box and text is removed prior to inserting your logo.

- ¹. Actual wholesale download speeds delivered to providers will be less than 1Gbps due to equipment and network limitations. Your experience, including the speeds actually achieved, depends on the configuration over which services are delivered to your premises, whether you are using the internet during the busy periods, and some factors outside of nbn's control (like your equipment quality and set-up, chosen broadband plan, age of device(s) and/or how your provider designs its network). ². nbn takes reasonable care to ensure your ability to connect to the nbn network after pre-installation of the nbn connection box but cannot guarantee uninterrupted service or immediate connectivity in all situations. You should contact your provider for assistance with any connectivity issues and remediation work that may be required.
- ³. Not all providers will be available at all locations and will offer plans based on the full range of nbn's wholesale speed tiers.
- ⁴. As substantiated in the Ergo research, commissioned by nbn in 2022.
