NBN fibre optic cable installed in Coffs Harbour

Super-fast broadband for Coffs Harbour a step closer

NBN Co has installed fibre optic cable in Coffs Harbour as part of the widespread rollout of the National Broadband Network in the area.

The distribution fibre is some of the first being laid which links the exchange at Coffs Harbour to homes and businesses throughout the local area.

“The fibre being hauled here in Coffs Harbour marks an important step in the rollout of the NBN on the Mid North Coast - it shows that work is underway to provide super-fast broadband to homes and businesses by early 2013,” NBN Co spokesperson Darren Rudd said today.

“Construction work has already commenced on rolling out the NBN to around 20,000 homes and businesses in Coffs Harbour and 10,000 premises in Sawtell.

“And construction is set to have commenced or be completed for around one million homes and businesses across New South Wales by mid-2015.

“In parts of Coffs Harbour we’re aiming for construction to wrap up in early 2013, which means homes and businesses are expected to be able to connect to services over the NBN shortly after.

“In addition to the work underway to connect parts of Coffs Harbour and Sawtell, work is under planning or construction in the following suburbs: Korora, Toormina and Boambee. NBN Co is aiming for construction in those suburbs to be completed in the first half of 2014.

“We plan to connect every home, school and workplace in Australia to the NBN within the next decade with a combination of fibre, fixed wireless and satellite technologies.

“The NBN is being designed to transform the way Australians communicate and keep in touch with each other, how they access education and health services, leverage e-business opportunities and immerse themselves in culture from around the world,” Mr Rudd said.

Once a street has access to the NBN, home and business owners will be informed and are then able to contact their telephone or internet service provider to see how they can get connected to services over the NBN.

Retail prices for NBN fibre plans based on 12/1Mbps or 25/5Mbps wholesale services* are comparable to existing ADSL2+ packages.**

** NBN Co is designing the NBN to be capable of delivering these speeds to NBN Co's wholesale customers (telephone and internet service providers). Speeds actually achieved by retail customers (end users) will depend on a number of factors including the quality of their equipment and in-premises connection, the broadband plans offered by their service provider and how their service provider designs its network to cater for multiple end users.*
